**SEE THE
DIFFERENCE...**

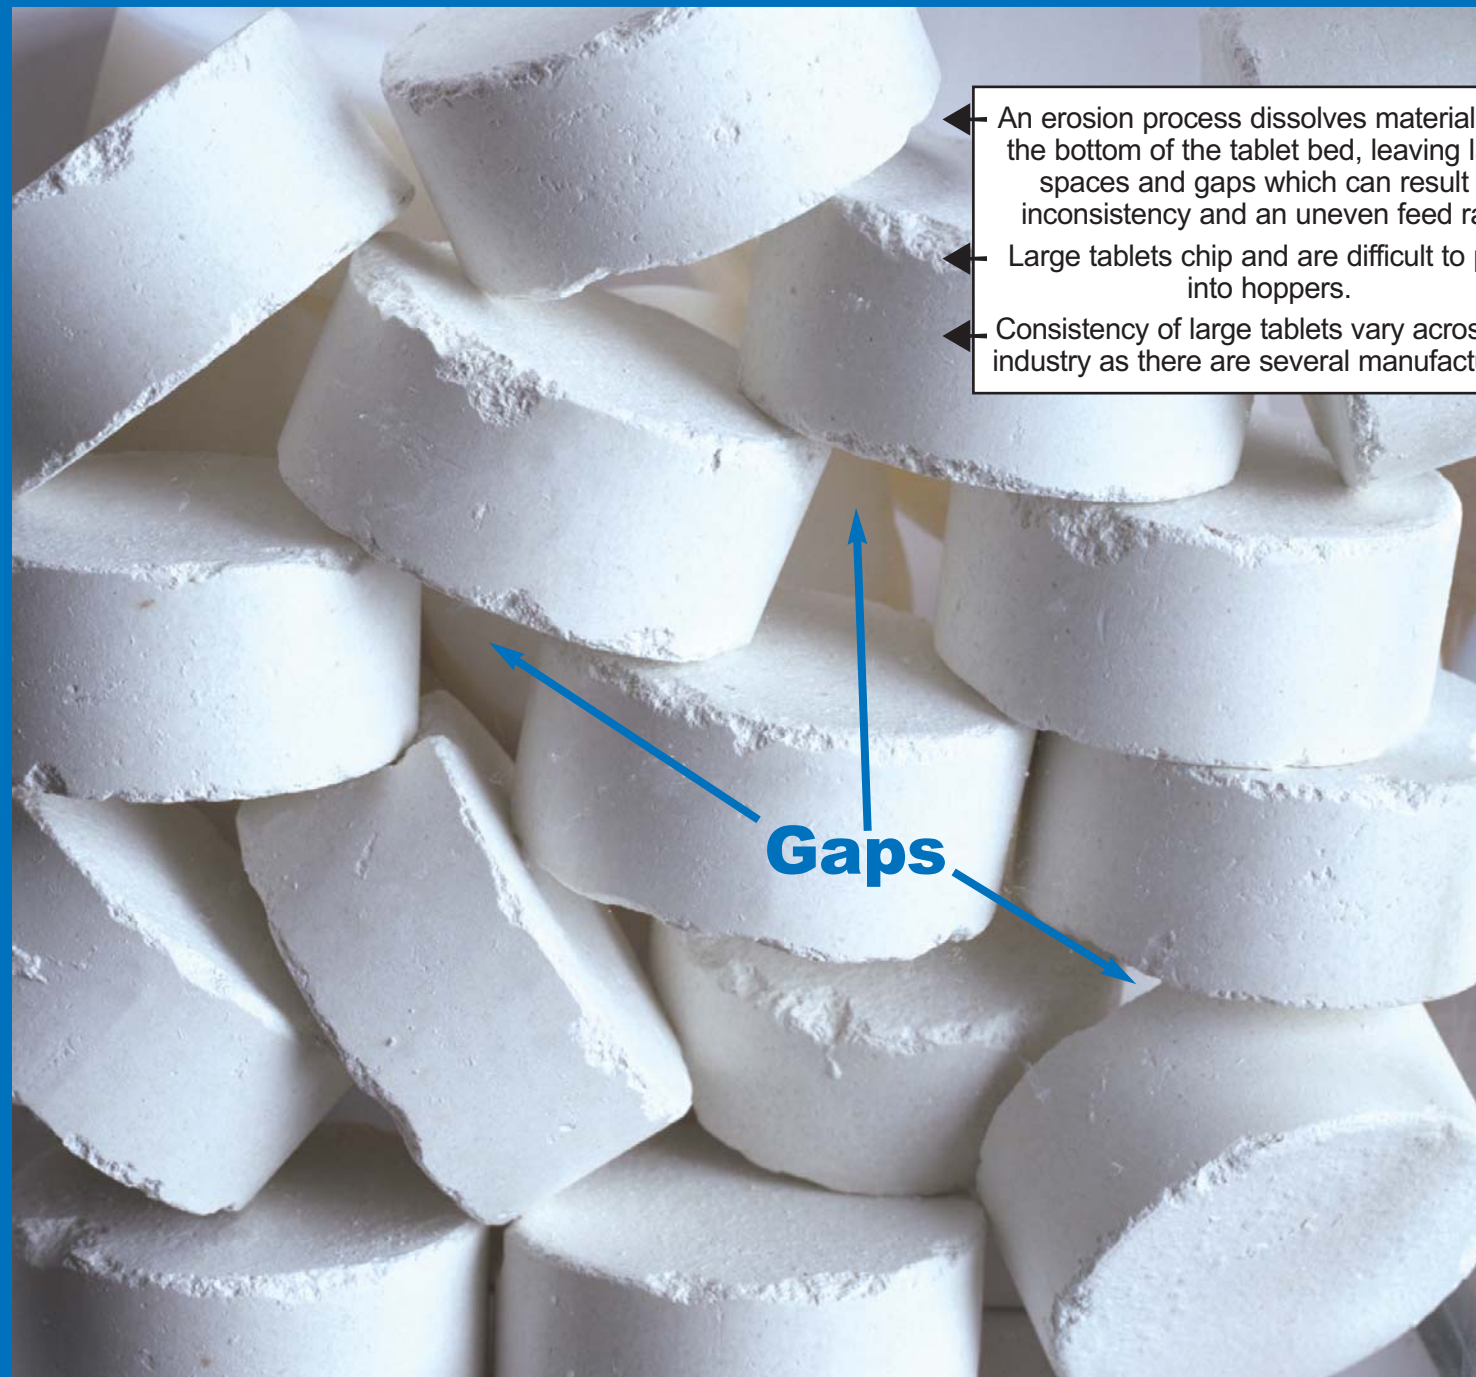

THE DIFFERENCE IS CLEAR!

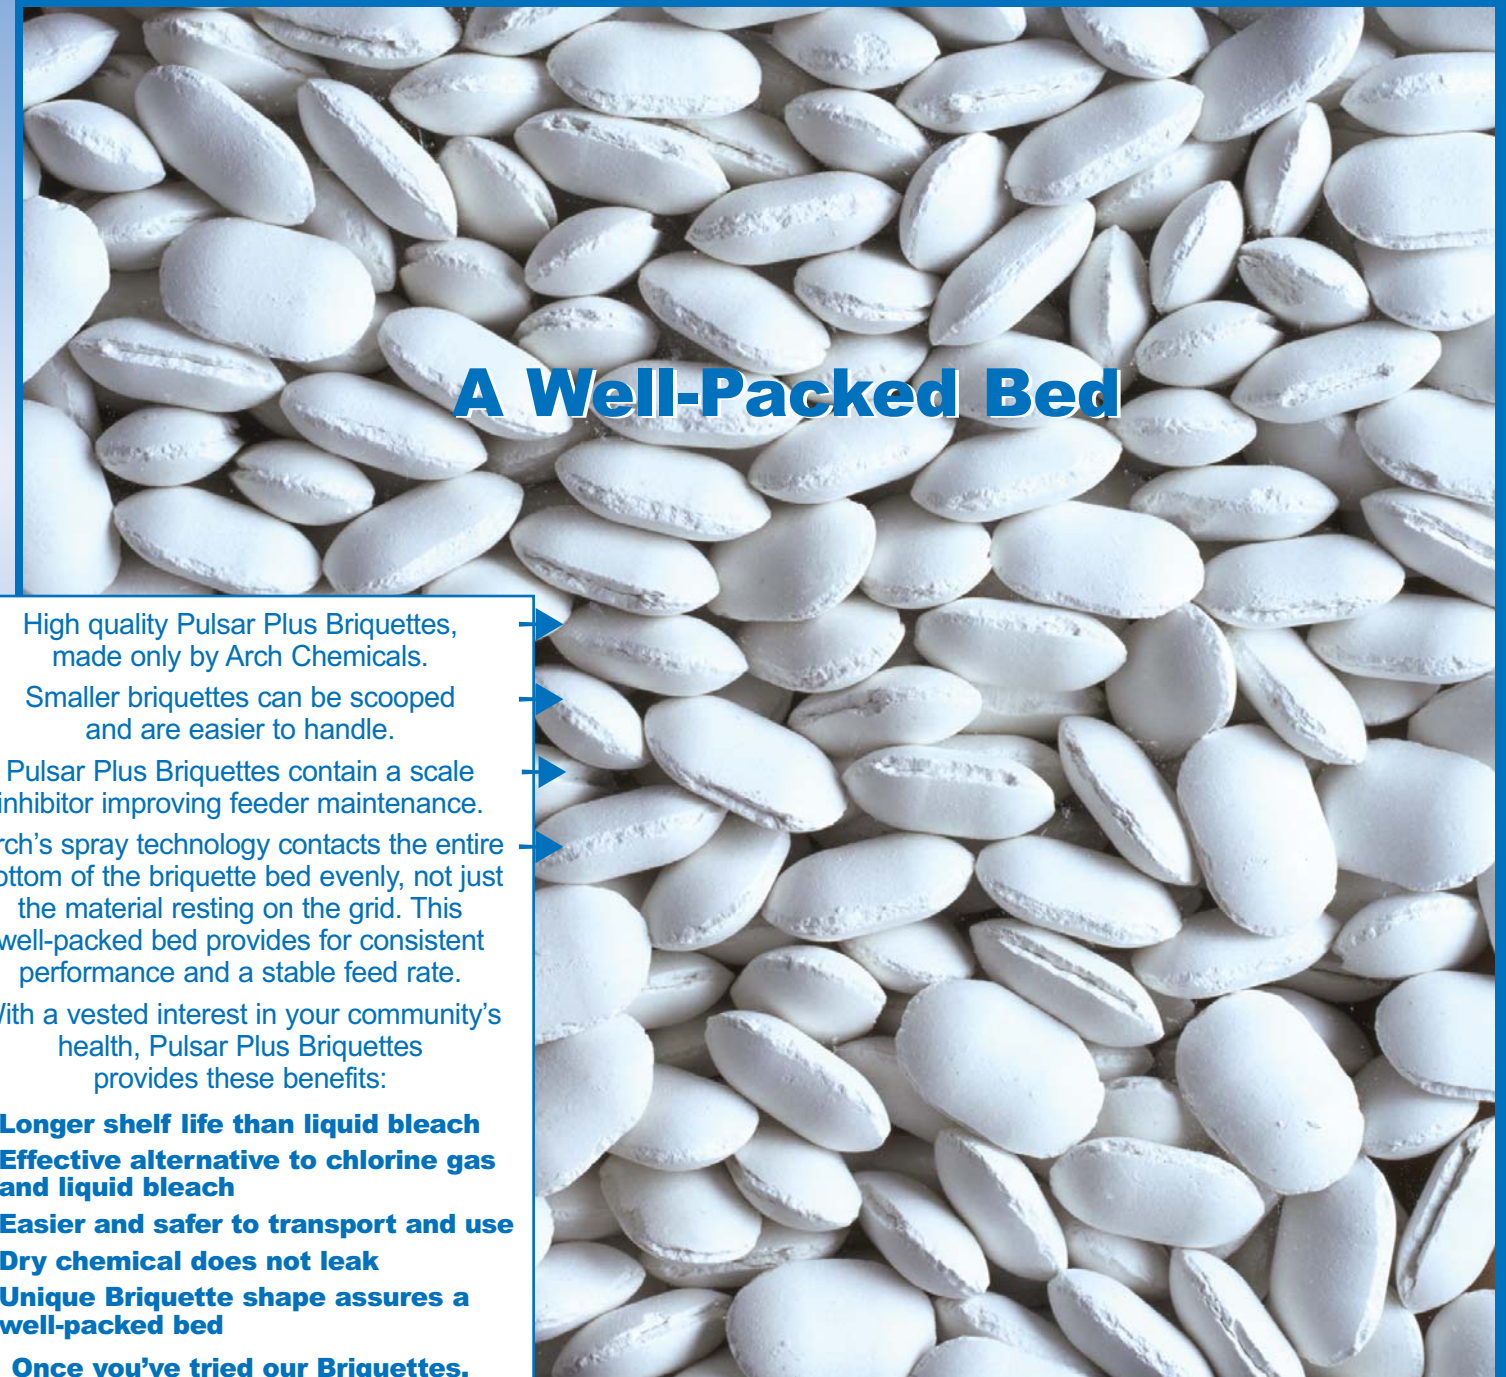

pulsar^{plus}
BRIQUETTES

Industry Standard Tablet

- ← An erosion process dissolves material from the bottom of the tablet bed, leaving large spaces and gaps which can result in inconsistency and an uneven feed rate.
- ← Large tablets chip and are difficult to pour into hoppers.
- ← Consistency of large tablets vary across the industry as there are several manufacturers.

Gaps

A Well-Packed Bed

- High quality Pulsar Plus Briquettes, made only by Arch Chemicals.
- Smaller briquettes can be scooped and are easier to handle.
- Pulsar Plus Briquettes contain a scale inhibitor improving feeder maintenance.
- Arch's spray technology contacts the entire bottom of the briquette bed evenly, not just the material resting on the grid. This well-packed bed provides for consistent performance and a stable feed rate.
- With a vested interest in your community's health, Pulsar Plus Briquettes provides these benefits:
 - **Longer shelf life than liquid bleach**
 - **Effective alternative to chlorine gas and liquid bleach**
 - **Easier and safer to transport and use**
 - **Dry chemical does not leak**
 - **Unique Briquette shape assures a well-packed bed**
- Once you've tried our Briquettes, you'll know how to consistently achieve the best results.**
