

In Tip-Top Shape

EASY CHLORINE POOL CARE SYSTEMS KEEP YOUR BACKYARD RETREAT IN TOP CONDITION.

OWNING A POOL CAN BE LIKE HAVING YOUR OWN PERSONAL BACKYARD RESORT. It is a place for gatherings or solitude, exercise or relaxation, but most of all it's a place for enjoyment. Thus, keeping your private oasis in top condition is important for the appeal of your pool and for the health of its swimmers. The POOLIFE Exclusive Pool Care Collection and the Pool Breeze Pool Care System offer the best of both worlds, plus reliability and ease.

CRYSTAL CLEAR

As a pool owner, it is your number one responsibility to make sure the pool is sanitized to ensure a healthy swimming experience for you and your family. To keep the pool sanitized, there are two important factors of which owners should be

aware: free available chlorine and shock treatments.

FREE AVAILABLE CHLORINE

Free available chlorine, or FAC, is the amount

To keep your backyard pool in its best shape, trust the POOLIFE and Pool Breeze pool care systems.

of chlorine in the water. It actively kills bacteria, controls algae and destroys organic contaminants. The FAC level should be between 1.0 and 4.0 parts per million (ppm). Should the level drop below 1.0 ppm, it is common to incur algae problems, cloudy water and bacteria. If the level should drop below 1.0 ppm, add a POOLIFE or Pool Breeze Sanitizer until the level is acceptable. It is recommended that the FAC levels be tested daily.

SHOCK TREATMENTS Shock treating your pool protects swimmers from bacteria and organic contaminants. Using POOLIFE TurboShock® shock product, POOLIFE Rapid Shock® or Pool Breeze shock products is the best way to eliminate harmful organisms without increasing the water's stabilizer level or corroding equip-

ment. It is especially important to shock the pool during opening and closing.

A BALANCING ACT

In addition to keeping the water sanitized to protect swimmers, it is also important to keep the water balanced to protect the pool and pool equipment. There are many factors to consider when it comes to the water balance, including rainstorms, sunlight, algae and frequency of use. The source of the water can also make a difference in the water quality.

There are six elements that can affect water balance: pH, total alkalinity, calcium hardness, total dissolved solids, temperature and cyanuric acid. When all these elements are in a safe range, the chance of corrosion and scale is greatly reduced, the sanitizer will be working at its optimum performance, and eye and skin irritation will be avoided. Test your water daily to maintain proper water balance. Once a month, take a sample to your authorized

POOLIFE or Pool Breeze dealer for a complete water analysis.

CLEAR THE WAY

To ensure that the water is at its utmost clarity, it is important to practice preventative maintenance. Algae and other particles can mar the appearance of sparkling water, so in an effort to prevent algae growth, it helps to understand how these organisms work.

Algae are microscopic plants that thrive in water. There are three main types found in pools: green, black or yellow (sometimes called mustard algae). Algae can grow on the pool's surface or float in the water and may turn the entire pool green, which can happen quickly—sometimes overnight. To prevent this, be certain there is an adequate amount of chlorine in the pool by following the POOLIFE Pool Care System or the Pool Breeze system and adding a preventative measure of algaeicide, such as POOLIFE

Algae Ban, POOLIFE Algae Bomb 30 or Pool Breeze Algicide once per week. Such application will not only kill existing algae but will also prevent new algae from growing. Both the POOLIFE and Pool Breeze systems offer a wide variety of water clarifiers, filter cleaners and balancers to prevent and combat other common pool problems.

When it comes to maintaining your backyard oasis, the choice is clear. By following the POOLIFE or Pool Breeze systems, you can keep your pool clean and clear all season long, no matter the size or shape of your personal backyard resort.

IS YOUR POOL BABY SAFE?

Pool Drowning is a constant danger for your child.

HERE'S STRONG, SAFE PROTECTION.

Protect-A-Child Pool Fencing offers safety and peace of mind. Now you'll be able to enjoy your pool and patio. The strong, finely woven mesh is climb resistant and transparent to preserve the beauty of your pool.

REMOVABLE IN MINUTES.

Lightweight sections unlock from the patio, lift out and roll up in minutes for compact storage.
