Wolmanized® Wood with Dispersed Copper Azole Earns EPP Rating

Wolmanized® Residential Outdoor® wood, protected by pressure-treatment with dispersed copper azole, has earned “EPP” certification from Scientific Certification Systems.

After comparison with the baseline preservative, SCS determined that dispersed copper azole type C treatment meets qualifications to be certified for Environmentally Preferable Treated Wood Process based on life cycle assessment.

Developed by Arch Treatment Technologies, Inc., the type C formulation of copper azole preservative joins recycled copper with a patented combination of two synergistic azoles as co-biocide. Retention levels for CA-C are lower than those of most comparable preservatives.

Scientific Certifications Systems is a leader in independent certification of environmental, sustainability, food quality and food purity claims.
