WeatherShield™ Premium Wood Products

WeatherShield™ wood combines the natural beauty of real wood with a lifetime limited warranty against termites and fungal decay. It's ideal for decking, railing and structural deck components, walkways, gazebos, fences, and other outdoor projects.

WeatherShield™ wood can be painted or stained. It's more economical than durable grades of redwood and cedar or artificial wood. And it's made from a renewable resource.

Increased

Stability

Less
Corrosive To
Hardware

Superior Pressure-Treated Wood Products featuring:

Limited Lifetime Warranty

Protection from rot, decay and termite damage.

Enhanced Durability & Improved Weather Protection

Factory applied wood stabilizer and water repellent reduce splitting, cracking, warping, and swelling and require no additional sealing for one full year.

New Lighter Color

Fresher, cleaner & brighter. Our lighter wood has more natural stainability.

Building Code Compliant

Less corrosive to screws, nails and hardware. May be used in contact with aluminum building products.

Your best protection against warping, splitting, & moisture damage for outdoor treated wood projects.

Wet conditions cause wood to swell; dry conditions cause it to shrink. With WeatherShield™ wood there is less dimensional change than with ordinary treated wood. Specially selected waterproofing ingredients are driven deep into the wood. So it's waterproofed to the core to help prevent ugly warping, twisting and splitting. Plus every inch is protected—top, bottom, and sides—where surface waterproofing can't reach.

The waterproofing inside WeatherShield™ wood will last for the life of the wood. But, WeatherShield™ wood is NOT a maintenance-free product. Over time, foot traffic and ultraviolet rays from the sun will break down the water repellent on the wood's surface.

You can apply any oil-based stain, wood protector or color finish as soon as 30 days after building your deck. For water based products a longer wait is recommended to allow time for the wood to dry.

Construction & Maintenance Recommendations

- When fasteners, connectors, and aluminum products are used in direct contact with treated wood, observe requirements of building codes and recommendations of hardware manufacturers.
- Butt deck boards together during construction to allow for initial shrinkage, which can be as much as 3/4" for a 6" wide piece of wood.
- 5/4 deck boards should be placed on 16 inch centers.
- To reduce splitting, drill a pilot hole about 3/4 of the diameter of the screw or nail.
- For 2" lumber, use 12d nails or 3" screws.
- For 5/4 decking, use 10d nails or 2 1/2" screws.
- Screws are recommended for their greater holding power.
- To help maximize surface protection and to keep your decking project looking better longer, apply a deck protection product annually.
- To revitalize a dingy appearance caused by dirt, mold or mildew, use deck wash to clean the wood.

Handling Instructions

- Do not burn pressure-treated wood.
- Wear a dust mask, goggles and gloves when cutting or handling treated or untreated wood.
- After working with wood, wash exposed areas thoroughly.
- Wash work clothes separately from other household clothing before reuse.
- Pressure-treated wood should not be used where it may come into direct or indirect contact with drinking water, except for uses involving incidental contact such as fresh water docks and bridges.
- Do not use pressure-treated wood in circumstances where the preservative may become a component of food, animal feed, or beehives.
- Do not use pressure-treated wood for mulch.

Lifetime Limited Warranty

See website on product end-tags for warranty information covering your use of WeatherShield™ wood.
